

DANIEL LEE

WEB DEVELOPER

PROFILE

Passionate about problem solving and design, I am fluent in the core HTML, CSS and Javascript stack, and proficient in React.js. Moreover, I am also deeply enthusiastic about learning and expanding my skillsets with both the tools I currently possess, and expanding my portfolio of technologies. I am currently most fluent in the front-end, but am also excited to expand my abilities back-end to be capable of implementing a full stack.

I am a fast learner, particularly when I am keen, as I am in this field- the ability to create and craft an idea from my head onto the page as an experience for others astounds me every day.

My education through completing PG Dip Computer Science from the University of Essex has equipped me with the strong conceptual fundamentals needed to produce clean and efficient code, and in particular has passed on a real passion for algorithms, which I have furthered through coding challenges, and am currently ranked 5kyu and rising in Javascript on Codewars.
